V. Problem Statement

Current website for efficiencyproduction.com is in built in legacy technology but is not implemented in Arcosa Azure WordPress Environment, and new build and release(devops) process.

VI. Problem Background

We need to make the website look as production website.

VII. Assumptions

We will be building the new website in WordPress with same design and look as existing website, implemented in Arcosa Azure and new build and release(devops) process.

VIII. Project Requirements

The new website will be built in WordPress with same design and look in Arcosa Azure WordPress Environment and Devops.

IX. Proposed Solution (Business)

We will be building the new website in WordPress where users can do the changes using WordPress dashboard with very minimal knowledge of coding in Arcosa Azure WordPress Environment, and new build and release(devops) process.

X. Proposed Solution (Technical)

We will be developing the new website from scratch in WordPress in Arcosa Azure WordPress Environment with new build and release(devops) process.

XI. Test Strategy

We are going to test the complete website and verify all the links, pages, content and images are proper and website is working as expected.

XII. Post Production Support Warranty: -

XIII. Approvals
